

Nix is broken after macOS upgrade

Upgrading [macOS](#) is known to break [Nix](#). When this happens, just uninstall Nix and then [install](#) it again.

1. Uninstall Nix

- Run `/nix/nix-installer uninstall`
- If that path above does not exist, [follow these instructions](#)[↗] to manually uninstall Nix.

2. Reboot your Mac

3. [Install Nix](#)

Links to this page

[Install Nix](#)

As it does not yet[↗] include an uninstaller, you will have to manually uninstall Nix when the time comes (example).

Install Nix using the unofficial installer[↗].*
