

# Copying packages to a remote Nix store

This is useful if your local machine is powerful and you have built a number of packages on it, but want to re-use them on another machine, without using a Nix cache or rebuilding them.

```
nix copy --to ssh-ng://admin@100.96.121.13 /nix/store/???
```

If you use [nixci](#), this looks like:

```
nixci . -- --option system aarch64-linux | xargs nix copy --to ssh-ng://admin@
```
