A tour of Nix

Functions can be called with an `attribute set`, as we have seen. This is another common example of partial application, so solve it!

Complete the arguments `attribute set`:

- A must evaluate to 'HappyFunctionsAreCalled'

Note: See video @youtube

```
1  let
2    arguments = {a="Happy"; b="Awesome";};
3
4    func = {a, b}: {d, b, c}: a+b+c+d;
5  in
6  {
7    A = func arguments XXX #only modify this line
8  }
9
```

reset   solution   run

```
let
  arguments = {a="Happy"; b="Awesome";};

  func = {a, b}: {d, b, c}: a+b+c+d;
in
{
  A = func arguments {d="Called"; b = "Functions"; c="Are";};
}
```
