A tour of Nix

6 / 35 Integer to string

Inserting `Strings` using the pattern `${attribute}` works great with `Strings`. But `${}` can do more. You can even run functions within it.

Use this and the builtin function `toString` to make the code work.

Note: See also https://noogle.dev/

Note: More builtin functions can be found in the Nix manual.

Note: See video @youtube

```
1 let
2   h = "Strings";
3   v = 4;
4 in
5 {
6   helloWorld = "${h} ${v} the win!";
7 }
8
```

reset | solution | run

```
let
  h = "Strings";
  v = 4;
in
{
  helloWorld = "${h} ${toString v} the win!";
}
```
